## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-4, 6-9, 11-18 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter.

Claims 1 and 6 recite, inter alia, "wherein data are transmitted via the parallel bus and the serial bus in form of a telegram with an identical data bus profile describing operating parameters of the at least one external drive and the at least one internal drive, said parameters selected from the group consisting of actual position value of an axle, setpoint value of an axle, status of the drive, and status of a component of the drive". Prior art of record do not teach or suggest, either alone or in combination, the aforementioned limitation, nor would it be obvious to modify those references to include such limitation. Examiner notes that although prior art teaches that bus bridges are used in PCs and workstations to allow two or more different buses to exchange data, there is no indication such a technique can be used to specifically control internal and external drives to control axles of a machine tool or production machine.
